

EPMCDMETST-66640 — Persist edited task title — Summary

Automated Documentation Sync — single summary page for story EPMCDMETST-66640, assembled from the repo artifacts under `docs/EPMCDMETST-66640/`. Space: **TaskLite**.

Story Overview

(from requirements.md)

As a user, I want my edited task title saved, so that changes persist.

- **Scope:** Implement/update the backend endpoint to persist an edited task title, validate input, return the updated task, and return 404 when the task does not exist.
- **Priority:** High · **Estimate:** 5 SP
- **Traceability:** BRD FR-4, FR-7
- **Entity in scope:** `tasks` only

Acceptance criteria:

1. A valid non-empty title is saved and the updated task is returned (changes persist).
 2. An unknown task id returns 404 and nothing is persisted.
 3. An empty/whitespace-only title returns 400 and no update happens.
- **Out of scope:** non-title fields, bulk edits, UI changes, authentication, audit history.
 - **Open questions [pending]:** task Owner and Status (not supplied; Jira read-only), and the definitive maximum title length (shipped with a provisional 255-char cap).

Architecture & Design

(from architecture.md + design-review.md)

- **Stack:** Express 5 + Prisma 6 over **SQLite** (TypeScript, ESM).
- **Endpoint:** `PATCH /api/tasks/:id`, body `{ "title": string }`.
- **Flow:** parse `:id` (non-integer → 404 before any DB call) → validate the body with Zod (fail → 400) → `prisma.task.update` with the trimmed title → return the updated task (200). The title is stored trimmed; `updatedAt` is maintained automatically by Prisma.
- **Error mapping:** non-integer/unknown id → 404; Prisma `P2025` → 404; validation failure → 400; anything unexpected → generic 500.
- **No new dependency:** Zod was already present.

- **Design review:** 5-lens review; initial verdict NEEDS CHANGES → **RESOLVED** after architecture patches. Risk noted: the 255-char cap is an interim value pending a product decision.

Code Changes

(from the pull request — see PR Reference)

- `backend/src/validators/task.validators.ts` — `updateTaskTitleSchema` (trimmed, min 1, max 255).
- `backend/src/controllers/tasks.controller.ts` — `updateTaskTitle` handler (id guard, Zod validation, trimmed persist, `P2025 → 404`).
- `backend/src/routes/tasks.routes.ts` — registered `PATCH /tasks/:id`.
- `backend/tests/tasks.patch.test.ts` — 6 Vitest + Supertest cases.
- `backend/package.json` (`test → vitest run`), `backend/tsconfig.json` (`include: ["src"]`).
- `.claude/config/app-profile.yml` — datastore corrected to **SQLite**.
- `CHANGELOG.md` — Unreleased → Added entry.
- Commits: `b7d6e55` (implementation) and `628ac8b` (review/verify/docs).

Review Outcome

(from code-review.md)

Verdict: APPROVED — no blocking issues. Four non-blocking findings carried forward:

#	Area	Type	Severity	Note
1	Security	Suggestion	LOW	No auth on the endpoint — known limitation, out of scope
2	Test Coverage	Suggestion	MED	Tests mock Prisma; add a real-DB persistence test (follow-up)

3	DRY	Suggestion	LOW	Extract a shared id-guard / P2025 helper (follow-up ticket)
4	Dependency Safety	Issue	MED	3 pre-existing high-sev advisories in dev-only prisma → @prisma/conf ig → deepmerge-ts (GHSA-ggr8-5vv4-36mx); fix needs a breaking downgrade

Verification Results

(from verification.md + the evidence log)

- **Build:** npm run build → exit 0.
- **Tests:** npm test (vitest run) → **Test Files 1 passed (1); Tests 6 passed (6); 0 failed.**
Every acceptance criterion traces to a passing test (AC1–AC3 plus non-integer-id and >255-char edges).
- **Evidence log:** backend/tests/evidence/run-EPMCDMETST-66640-20261001T102147Z.1log (local artifact; gitignored).
- **Doc-quality pass:** datastore consistent (SQLite) across all docs; endpoint/contract consistent between architecture, code, and tests; design-review RESOLVED; remaining [pending] markers are genuine open questions, not gaps.
- **Known coverage gap:** tests mock Prisma, so real-DB persistence of AC1 is a recommended follow-up.

PR Reference

- **PR #2:** <https://github.com/cprash/tasklite-ai-sdlc-claude/pull/2>
- **Status:** **MERGED** on 2026-10-01 into main (merge commit 86c7d551), by a human (G2).
- Jira EPMCDMETST-66640 status is updated by a human (the pipeline never writes to Jira — G1).
